Institution waste management practices

B.L.D.E.A.'S, J.S.S. College of Education has some key waste management practices in place.

1. Segregation of Waste : This involves sorting waste into different categories, such as recyclables, compostables, and non-recyclables, to ensure proper disposal and recycling. Effective segregation helps in reducing the amount of waste sent to landfills and improves recycling rates.

2. E-Waste Management : This practice includes the proper disposal and recycling of electronic waste like old computers, printers, and other electronic devices. E-waste contains hazardous materials that need to be handled carefully to prevent environmental contamination.
